

For Patients

Do you have Heart Failure?

You may be interested in the FDA approved Optimizer® Smart, which is a device used to treat heart failure in patients on medical therapy who still have significant symptoms

Other people like you who are being treated for their HF with the Optimizer® Smart's **CCM®** therapy have volunteered to join the Optimizer Post Approval study to better understand the long-term safety and quality of life information of this therapy. Existing studies show that it may be extremely helpful.

Optimizer® Smart devices are implanted just the way pacemakers/defibrillators are implanted, through a small incision.

Participants will be asked to complete the following:

-  Study related testing at no cost to determine eligibility
-  1 clinic visit after implant of the Optimizer Smart System
-  Routine checks via phone calls
-  One annual in-home visit for 3 years

Ask your doctor about the Optimizer® Smart CCM® device, and about participating in the Optimizer® Smart Post Approval study.
